DETAILED ACTION

1. The disclosure is objected to because of the following informalities: no heading for each section in the application. Headings such as background of the invention, summary of the invention, brief description... should be included in the specification.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 2 and 9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite in that it fails to point out what is included or excluded by the claim language. This claim is an omnibus type claim.

The word "only" in claims 1 and 8 excludes any additional packet marking determination as described in the dependent claims 2 and 9. The office suggests that the word "only" is deleted in claims 1 and 8.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1-15 are rejected under 35 U.S.C. 102(e) as being anticipated by Wang et al.

- With regards to claims 1, 8, and 15, Wang et al. discloses a marking determining device (figure 5) for determining a packet marking of packets of an incoming packet-flow comprising: a threshold holding part, adapted to hold a threshold value for traffic reservation parameter, the threshold value lying between the minimum and maximum values of traffic reservation parameter (figure 6 T_H), metering part adapted to check on the actual value of traffic reservation parameter (claim 1, token level indicator), determination part adapted to determine packet marking of packets only based on actual value of traffic reservation parameter if the actual value of traffic parameter exceeds the threshold value for traffic reservation parameter (claim 1, column 6 lines 22-34)

Art Unit: 2667

- Regarding claims 2 and 9, Wang et al. reveals determination packet marking additionally is based on at least one additional pre-assigned priority for each packet of the incoming packet flow (column 5 lines 34-47), each additional pre-assigned priority having a separate threshold value assigned to traffic reservation parameter (figure 6 T_H and T_L).
- Regarding to claims 3 and 10, Wang et al shows the traffic reservation parameter is the filling level of a token bucket (Figure 6)
- With regards to claims 4, 5, 6, 7, 11, 12, 13, and 14, it is inherent in Wang et al. and well-known in guaranteed bandwidth service that pre-assigned and additional pre-assigned priority are sending rate estimate, packet loss priority, packet traffic category, and type of sender.
